Faculty Coordinator:

Dr. Manjith B.C.
Dr. Ebin Deni Raj

Resource Person: Hemanth kumar

Experience

- Coordinate and conduct group and individual training sessions based on staff and organizational learning needs.
- Good exposure knowledge in FPGA Boards and EDA tools in Xilinx Vivado, Mentor Graphics.
- Various case studies on the Wireless Communication and Antennas.
- Projects Done - Machine learning and AI based on Computer vision projects using python scripting language.

Brief Abstract for the session (PYNQ- Python productivity for Zynq)

- In this Session, we are going to learn about general overview of the FPGA architecture along with Understand the Vivado design flow by Creating and using C/C++ /embedded C programming applications with Zynq Device. Write a software application to access peripherals like GPIO and etc. PYNQ is an open-source framework which we are able to Build python-based projects in jupyter notebook using PYNQ Frame Work.
- **Key topics cover:**
 - ➤ Introduction to FPGA Resources
 - ➤ PYNQ FPGA: Zynq Architecture
 - ➤ Introduction to PYNQ is an open-source framework and and Machine Learning Applications
